GOVERNMENT

The Government of the City of Santa Fe, Argentina
pledges to

Say NO to child labour

Say NO to child labour

Name:

"Infancias Sin Prisas": Santa Fe says NO to child labour

Description:

The objective is to train workers from public and educational institutions in the city of Santa Fe – and in particular those who work with the target population – to detect and address cases of child labour. These workers include staff working in municipal nurseries, social policy agencies and educational institutions. The training will focus on regulations, indicators for detecting child labour and different ways of addressing specific situations.

In a first cycle of training, 300 municipal workers will be trained as part of a partially face-to-face training cycle that aims to provide them with knowledge and support tools for the prevention and eradication of child labour and to guarantee children the right to grow up with protection.

Implementation plan:

A three-class training course for institutional workers will be developed in collaboration with the education and integration departments of the municipality. The course contents will be distributed as follows:

- Class 1: What is child labour?
- Class 2: Causes and consequences of child labour: National and international regulations
- Class 3: Detecting and addressing child labour locally

The classes will be imparted during the second half of 2021.

Impact:

The fulfilment of this pledge from the municipality of Santa Fe will contribute to the prevention and eradication of child labour, through the training of institutional workers to detect and act early in situations where children and adolescents' essential rights have been violated, threatening their access to education, rest and recreation and putting the normal psychological and social development at risk. Families will be supported with specific actions in the social, labour, educational and health spheres with a view to facilitating optimal, comprehensive development in childhood.
